

Water System:

Source: Dripping Springs.

Ground: 7,000,000 Gal / Day

Max 6,000,000

Consumption: Gal / Day

Pressure in 165 PSI

Mains:

Source: Towers

Elevated: 2,000,000 Gal / Day

Min: 4,600,000 Gal / Day

Pressure in 130 PSI

Mains:

Sanitation and Sewage Treatment:

Okmulgee has a roughing tower and activated sludge type of sewage treatment. The City's sewage treatment system is currently operating at approximately 66% of capacity. The major BOD contributor to the WWTP will be going offline September 2003 thereby greatly reducing the present load capacity and freeing up capacity for industrial development and growth.

Sewer Treatment Capacity and Load:

Measurement 35,000 pounds per day.

Capacity:

Present Load: 23,000 pounds per day.

Population 55,000

Equivalent:

Present Load 36,000

Equivalent:
